

LE CHÂTEAU BISTRO

OPERATIONAL POLICY MANIFESTO

Document ID: POL-2026-V1 • Last Updated: May 2026 • Classification: Internal Standard

PURPOSE & SCOPE

This Operational Policy Manifesto establishes clear architectural, temporal, and conversational guidelines for **Le Château Bistro**. To maintain our reputation for premium hospitality, brand consistency, and operational safety, all automated interaction layers (including AI-driven voice and text booking interfaces) and physical staff members must strictly adhere to these parameters. Deviation from these principles compromises service velocity and brand positioning.

SECTION 1: PHYSICAL PARAMETERS & OPERATING SCHEDULES

1.1 Location and Parking Infrastructure

Le Château Bistro operates exclusively from its premium flagship location in the heart of the first arrondissement:

OFFICIAL COMMERCIAL ADDRESS

14 Rue de Rivoli, 75001 Paris, France

The commercial premises are integrated into a historical Parisian structure and do not contain a private, dedicated, or on-site customer parking lot. Guests utilizing private vehicles must be actively routed to localized municipal infrastructure.

Public street parking and secure underground vehicle positioning are accessible at the nearby "**Parking Vinci**" facility, which is situated exactly **150 meters away** from the primary restaurant entrance. Front-of-house staff and digital reservation responses must proactively provide these coordinates to vehicle-dependent patrons.

1.2 Standard Weekly Operational Hours

The restaurant maintains strict terminal door controls to regulate workflow and ensure safety compliance. The physical facility adheres to the following weekly schedule:

DAYS OF OPERATION	DOORS OPEN	DOORS CLOSE	STATUS
Monday through Saturday	11:30 AM	11:00 PM	Active
Sunday	—	—	Closed

The facility is completely closed to the public on Sundays. This closure is absolute and non-negotiable, reserved exclusively for executing essential weekly building maintenance, technical infrastructure audits, and intensive structural sanitation cycles.

1.3 Food and Beverage Kitchen Cutoff Framework

While physical facility doors remain open until 11:00 PM to accommodate seated guests completing their experience, the back-of-house kitchen operations adhere to a separate strict timeline.

CRITICAL TECHNICAL CONSTRAINT: KITCHEN CUTOFF AT 10:30 PM

The kitchen completely halts the ingestion of all new preparation orders at exactly **10:30 PM**. Sitting down, placing terminal orders, or processing dine-in configurations at 10:45 PM is structurally impossible within our point-of-sale and kitchen management systems.

SECTION 2: CONVERSATIONAL BOUNDARY CONTROLS & ESCALATION TRIGGERS

2.1 Automated Reservation Caps

To ensure culinary precision and service excellence, the platform's automated voice reservation processing script enforces a strict maximum safety capacity ceiling:

- **Automated Headcount Scope:** Inbound callers may reserve table configurations automatically for party headcounts ranging strictly between **1 and 8 guests**.
- **Large Group Classification:** Any reservation request indicating a target party size parameter of **9 or more individuals** breaks automated thresholds and must be immediately classified as an *Event / Large Gathering*.
- **AI Action Restriction:** The AI engine is structurally forbidden from confirming these states. It must immediately invoke the SIP telephony transfer bridge to route the live audio stream directly to the human events coordinator.

2.2 Inventory Boundaries & Domain Constraints

Le Château Bistro operates exclusively within a classic French restaurant vertical. To protect culinary identity and inventory efficiency, conversational systems and front-of-house representations must remain strictly within domain limits.

APPROVED IN-DOMAIN MENU PARADIGMS	PROHIBITED / NON-DOMAIN REQUESTS
• Charolais Beef Burgers & Classic Frites • Wild Mushroom & Truffle Risottos • Curated Regional Wines & French Appellations	• Sushi Variations (e.g., Spicy Tuna Rolls) • Italian Fast-Food Elements (e.g., Pepperoni Pizzas) • Global Fast-Casual Non-French Elements

Any customer request seeking non-domain inventory or culinary fusions outside our specific database must be flatly and politely denied. No custom exceptions are permitted.

2.3 Customer Conflict & Sentiment-Driven Escalation Protocols

Automated systems must protect the user experience by identifying negative sentiment indicators. If an inbound caller exhibits immediate frustration, logs severe service complaints regarding historical orders (e.g., *"my delivery order from last night arrived freezing cold"*), or explicitly demands immediate transactional manipulation such as bank refunds, automated dialogue must stop immediately.

The handling engine must execute the following protocol sequentially:

1. **Express System Empathy:** Deliver a formal, polite apology acknowledging the customer's sentiment.
2. **Log Baseline Details:** Commit the active order number, timestamps, and customer metadata into the active session log.
3. **Flag Dashboard:** Instantly push a priority alert token onto the team's internal Slack dashboard.
4. **Live Telephony Bridge:** Initiate an immediate, priority call transfer to the on-duty manager via the SIP bridge.

SECTION 3: POLICY GOVERNANCE & COMPLIANCE

This document represents the ultimate operational logic framework for Le Château Bistro. All software updates, script revisions, and staff training modules must match these rules identically.
